RICERCA E PRODUZIONE SCIENTIFICA

Principali focus di ricerca

Negli ultimi cinque anni, ho prodotto un corposo corpus di lavori accademici con un focus specifico sul trattamento dei disturbi dell'umore, conducendo studi significativi nel campo della depressione resistente al trattamento, impiegando approcci terapeutici pionieristici come le sostanze psichedeliche e le tecniche di stimolazione cerebrale. Inoltre, i miei lavori scientifici abbracciano vari aspetti della dipendenza, tra cui alcol, metadone, cocaina, stimolanti, e gioco d'azzardo. Ho posto particolare enfasi su aree quali la doppia diagnosi, le complicazioni e le conseguenze associate alla dipendenza, i tratti della personalità, l'abuso di sostanze associato all'uso di Internet e l'applicazione di metodologie psicometriche.

Nel contesto della schizofrenia, il mio coinvolgimento attivo si estende alle indagini di neuroimaging volte a chiarire i fondamenti neuropsicologici delle abilità linguistiche e della suicidalità, nonché all'esame delle reti di materia grigia all'interno delle regioni prefrontale-talamico-cerebellare.

I miei interessi di ricerca comprendono anche i disturbi bipolari, con un focus specifico sul trattamento farmacologico che impiega stabilizzatori dell'umore, nonché sulla valutazione clinica di individui che presentano tratti di personalità borderline. Infine, desidero sottolineare la mia spiccata inclinazione verso l'integrazione della filosofia e dell'antropologia nel campo della psichiatria. Il mio approccio clinico è profondamente radicato nella fenomenologia, considerando la relazione empatica tra il clinico e l'individuo sottoposto a terapia come la fase cruciale del processo terapeutico.
